

# Delete a Product Catalog Dataset

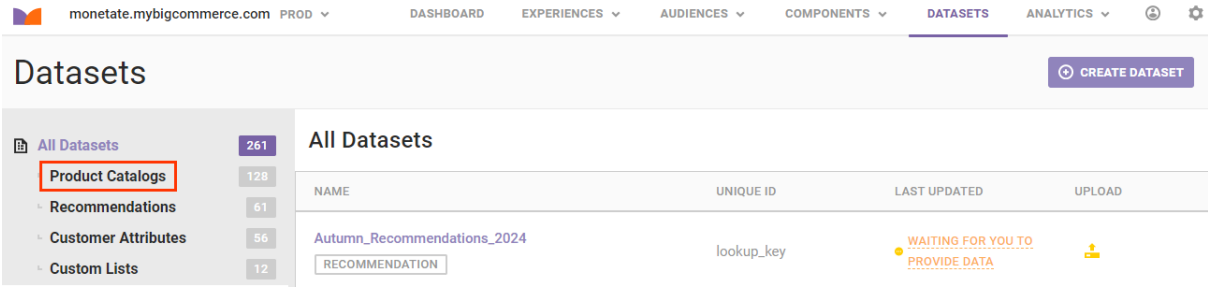

This content is only for clients with the one-click **DATASETS** option in the top navigation bar. If you click **DATASETS** and see **Product Data** and **Customer Data** listed as menu options, then this content doesn't apply to your account. Instead, see [Delete a Product Catalog](#).

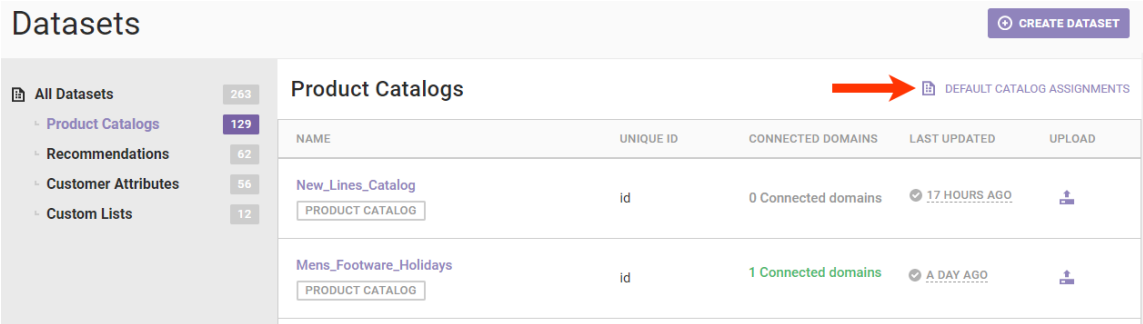

For some reason you may need to delete a product catalog dataset from the Monetate platform. Doing so may require you to assign a different default product catalog if the dataset that you want to delete is connected to one or more domains in your account, as well as to select a different dataset if the dataset that you want to delete is used in any recommendation strategies.

Follow these steps to delete a product catalog dataset.

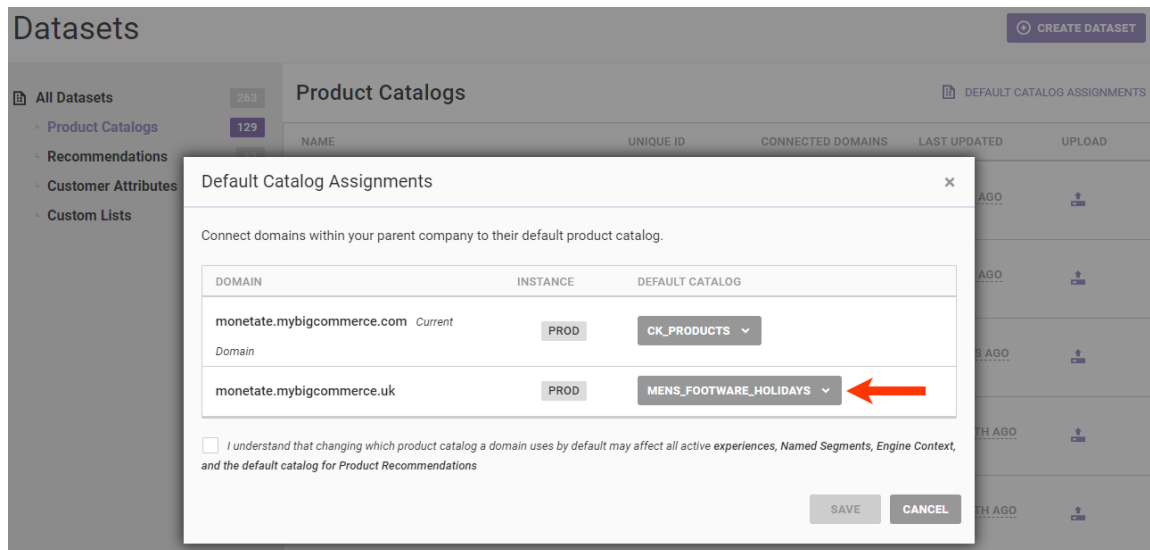

1. Click **DATASETS** in the top navigation bar.
2. Click **Product Catalogs** in the left-hand category listing.

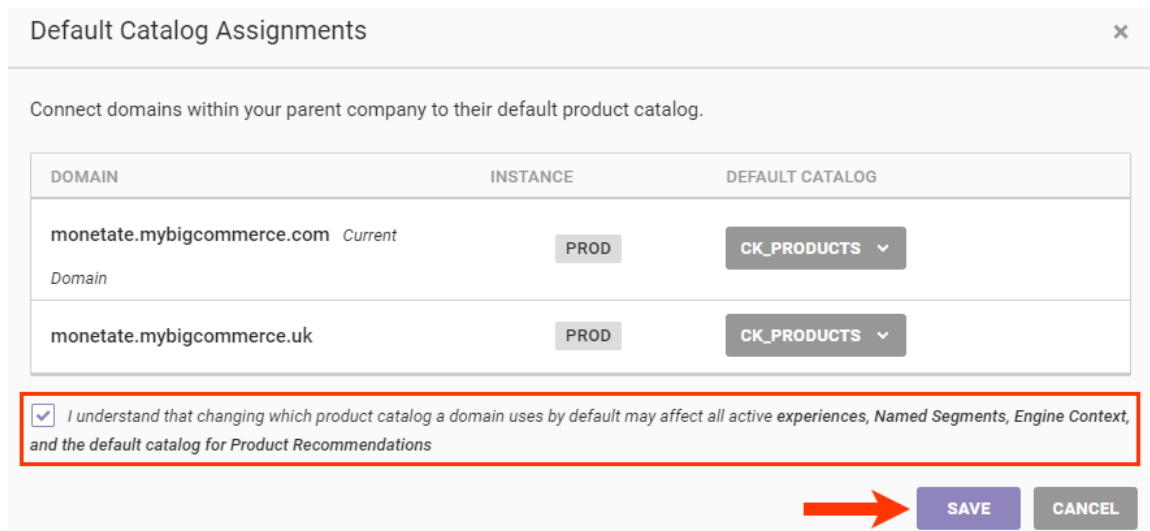

3. Scroll as necessary to find the product catalog that you want to delete. If **0 Connected domains** appears in the **CONNECTED DOMAINS** column, continue to the next step. If the product catalog is the default one for one or more domains, then assign a new one to the connected domain(s).
  - a. Click **DEFAULT CATALOG ASSIGNMENTS**.

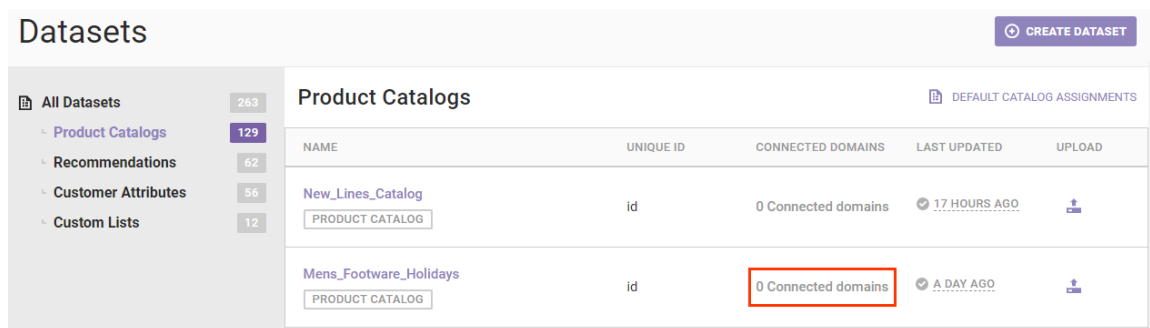

- b. Select a different default product catalog from **DEFAULT CATALOG** for each domain that currently has the product catalog that you want to delete as its default.

- c. Click the checkbox to acknowledge you understand the possible implications of reassigning default product catalogs, and then click **SAVE**.

- d. Scroll as necessary to find the product catalog that you want to delete on the Product Catalogs list page, and then confirm that **0 Connected domains** now appears in the CONNECTED DOMAINS column.

4. Click the name of the product catalog, click the additional options menu (...), and then click **Delete Dataset**.

If the product catalog you are deleting is not part of any other feature or function within the platform, then clicking **Delete Dataset** immediately deletes the catalog. No confirmation prompt appears.

- If the product catalog is part of any recommendation strategy, regardless if that strategy is used in any active or inactive experience, then you must select a replacement product catalog for each strategy listed in the Delete Catalog modal.

After the product catalog is deleted, the All Datasets list page loads with a message confirming the deletion.

The screenshot shows the Monetate interface for the 'All Datasets' page. The top navigation bar includes the URL 'monetate.mybigcommerce.com', environment 'PROD', and menu items for 'DASHBOARD', 'EXPERIENCES', 'AUDIENCES', 'COMPONENTS', 'DATASETS', and 'ANALYTICS'. A 'CREATE DATASET' button is visible in the top right. On the left, a sidebar lists dataset categories: 'All Datasets' (262), 'Product Catalogs' (128), 'Recommendations' (62), 'Customer Attributes' (56), and 'Custom Lists' (12). The main content area is titled 'All Datasets' and features a green confirmation message: 'Catalog Mens\_Footware\_Holidays has been deleted.' Below the message is a table with columns: 'NAME', 'UNIQUE ID', 'LAST UPDATED', and 'UPLOAD'.

The only way to restore a product catalog that you deleted is to create it as if it were a brand new catalog, starting with [creating the schema](#).
