

Account Settings

You can access all of the settings for your Monetate account by using the options available in the settings menu, which you access by clicking the cog icon in the far-right corner of the top navigation bar.

The screenshot shows the Monetate dashboard interface. At the top, there is a navigation bar with the URL 'monetate.mybigcommerce.com' and a 'PROD' environment indicator. The main navigation includes 'DASHBOARD', 'EXPERIENCES', 'AUDIENCES', 'COMPONENTS', 'DATASETS', and 'ANALYTICS'. A settings cog icon is highlighted in the top right corner. Below the navigation bar, the dashboard displays 'monetate.mybigcommerce.com' and a filter for 'Showing experiences and account analytics from 30 DAYS'. The main content area features three cards: 'Auto Personalization experiences' with a link to 'Create an Automated Personalization experience', 'Dynamic Test experiences' with a link to 'Create a Dynamic Test experience', and a 'Standard' experience card showing '6 Standard' and '41 100%'. A table with columns 'METRIC', 'VALUE', and 'PERFOR' is partially visible. On the right side, the 'ACCOUNT' settings menu is open, listing options such as Sites, API Documentation, Users, Script Revision, Integration, Compliance Tools, Default Metrics, Email, Seasonality, Engine Context, and Experience Tags.

The configuration of your Monetate account as well as your platform user role can impact the options available to you in the settings menu.

On the Sites page you can [set the time zone](#) for each domain associated with your account and add or configure [Stealth Groups](#).

Navigate to the Users page when you need to [manage](#) who has access to the Monetate platform and each user's assigned role. From this page you can [reset a password](#).

The Integration page provides you the means to set up [third-party analytics](#), get the [Monetate tag](#), install the [Monetate Inspector](#) browser plug-in, enable certain [Monetate JavaScript API](#) integrations, construct [Engine API requests](#), and [manage first-party proxies](#).

The options you select on the [Default Metrics](#) page determine which KPIs are displayed in experience results.

The [Email](#) page appears in the settings if your account has the Email add-on feature. Here, you can add or revise your email service provider (ESP), and add or update your account's email domain alias for images that Monetate serves in email experiences.

Visit the [Seasonality](#) page of the platform settings to adjust the monthly percentages that calculate how external factors such as time of year, weather, or market changes affect your site traffic.
