

Event Builder FAQ

Can I use multiple values when tracking a cookie value?

No, you can only input a single value in **Cookie Value**. You can select the **Contains, Equals, Starts with** from **Cookie Value Compare** to further delineate what cookie you want to track. If you want to track multiple values in a single cookie, you must create multiple events.

Can I track non-Boolean event types?

You currently cannot use Event Builder to create an event to track non-Boolean event types.
