

Create a Slotted Recommendation

Follow these steps to create a slotted recommendation to use in a [Product Recommendations action](#).

1. Click **COMPONENTS** in the top navigation bar, select **Product Recommendations**, and then click the **Slotted Recommendations** tab.
2. Click **CREATE SLOTTED RECOMMENDATION**.
3. Select the option on the Recommendation Permissions modal to make the slotted recommendation either global or local, and then click **CONTINUE**.

You cannot change the permission after you click **CONTINUE**.

4. Name the slotted recommendation. Click the placeholder title, type the name into the text field, and then click the green checkmark.

This field can contain a maximum of 64 characters.

5. Select up to four recommendation strategies.
 - Scroll through the list of recommendation strategies in a selector, or use the search bar to find one by name.
 - After you select a strategy from one selector, it still appears as an option for each of the other selectors.
 - To remove a previously selected strategy from one of the slots, select **Select Recommendation Strategy** before saving the configuration.
6. Set the recommendation strategy [slotting sequence](#).
 - a. Click the first slot, and then select the letter that corresponds to the recommendation strategy that you want to be the source of the first product recommended.
 - b. Click the second slot, and then select the letter that corresponds to the recommendation strategy that you want to be the source of the second product recommended.
 - c. As necessary, click and select a letter corresponding to a recommendation strategy until you have slotted the recommendation strategies in the sequence that you want for up to 20 slots total.
7. Click **SAVE**.
